**Mushroom Compost  
Fertilizer & Soil Amendment**

Mushroom Compost is made from agricultural materials, such as wheat straw bedded horse manure, hay, poultry manure, cottonseed meal, cocoa shells, sphagnum peat and gypsum, providing a consistent, formulated & homogeneous product. After mushrooms are harvested, the Mushroom Compost is pasteurized. The resulting compost can be used for agricultural crops since it is an ideal fertilizer and soil amendment with important nutrients.

Mushroom Compost has high water and nutrient holding capacity and exhibits no nitrogen draw down problems. As a fertilizer and soil amendment for farming, turf management and home gardening, Mushroom Compost supports plant growth in a variety of plant applications such as: corn yields, broccoli and cabbage yields, tomato yields and turf applications.

**Recommended Application:** (Guarantor) recommends applications in the spring and fall, however, it can be applied at any time of the year or season. Incorporate (Brand) into the soil to increase absorption and nutrient dissemination. Apply by dropper spreader, whirlwind spreader, broadcast by hand, sprinkle or side dress around the base of plants. May be mixed and applied with other products.

**Application Rates** will vary with soil analysis and purpose of application. (Guarantor) recommends soil testing before application of any fertilizer or soil amendment.

**Active Ingredient:** 100% Mushroom Compost

(Guarantor) guarantees that you will be 100% satisfied with the results of this product. If for any reason you are not completely satisfied, return the unused portion along with a copy of your register receipt and a SASE to (Guarantor) and we will cheerfully send you a refund.

All recommendations, application rates and directions for use of this product are to be considered a guide. Climatic conditions, geographic location and other influential factors in using this product are beyond the control of the manufacturer.
